Executive Summary

9Jobs.co is an innovative done-for-you job application and career optimization service tailored specifically for the Australian job market. The platform offers excellent value-focused copywriting, clear service structures, and a dynamically configured sitemap. However, the website suffers from key technical SEO deficits including a missing robots.txt crawl directive file, lack of Open Graph and Twitter Card tags, and absent structured JSON-LD data on key organizational and pricing pages. Enhancing technical accessibility, metadata ranges, and E-E-A-T credentials will dramatically boost visibility across both traditional search engines (Google) and AI-driven generative engines (Perplexity, ChatGPT Search).

Dimension	Score	Status	Key Takeaway
SEO	5/10	Needs Work	No robots.txt, missing OG/Twitter tags, short titles on inner pages.
GEO	5/10	Needs Work	Missing author bios/EEAT credentials, lacks Organization schema.
AEO	6/10	On Track	FAQ Schema on blogs/service pages is strong; needs homepage FAQ schema.
Combined	16/30	Developing	Good foundation of quality content, but technical details require attention.

Pages Audited

We performed a direct source code audit of the following key routes inside the 9Jobs codebase:

URL Path	Page Type	Audit Findings / Notes
/	Homepage	Title exactly 60 chars. Hero illustration missing descriptive alt text. No schema.
/about	About Page	Title too short (12 chars). Missing bios and EEAT credentials. No schema.

/pricing	Pricing Page	Title too short (14 chars). Meta description short (71 chars). No Product schema.
/contact	Contact Page	Title short. Clear address, hours, phone. Uses Gmail instead of brand domain.
/blog	Blog Index	Title short. Shows recent articles. Great localized city-specific content.
/blog/ats-resume-format-australia	Blog Post	Title & description lengths perfect. JSON-LD FAQPage & BlogPosting schema present.
/job-application-services-australia	Service Page	Title perfect. FAQ Schema present. Excellent layout and logical headings.

SEO Analysis

Our analysis evaluated the website against traditional search engine standards, covering technical configurations, content quality, and structured data.

Technical On-Page

Signal	Finding	Status
Title Tags	Home/Service page titles are optimized (53-60 chars). Inner pages like About, Contact, and Pricing are way too short (12-14 chars).	Needs Attention
Meta Descriptions	Home and Service page descriptions are solid. About, Contact, and Pricing descriptions are too short (71-90 chars).	Needs Attention
robots.txt	The robots.txt file is missing from the public directory entirely. Crawlers have no explicit instructions.	Missing
Social Metadata	Open Graph and Twitter Card tags are missing in layout.js, which restricts social link formatting.	Missing
Canonical Links	Canonical links are correctly configured across pages utilizing Next.js metadata API.	Good

Content Quality

Signal	Finding	Status
Word Count	Primary pages are rich in content (1000+ words on homepage, extensive blog posts).	Good
Heading Hierarchy	Strict hierarchy (singular H1 on each page, logical nesting of H2s and H3s).	Good
Image Alt Texts	Several Image tags have empty alt attributes (e.g. app-icon.svg in the hero section has alt="").	Needs Attention

Structured Data

Signal	Finding	Status
Sitemap Validity	Dynamic Next.js sitemap configuration is well-defined and includes priorities/frequencies.	Good
JSON-LD Schema	FAQPage and BlogPosting schemas are configured on inner pages. Homepage, About, Contact, and Pricing pages completely lack schema markup.	Needs Attention

GEO Analysis

Generative Engine Optimization (GEO) measures how effectively AI engines (Perplexity, ChatGPT, Gemini, and Google SGE) synthesize and cite your content.

E-E-A-T Assessment

Signal	Finding	Status
Author Bios	Articles list '9Jobs' as the organization author, but lack specific, named subject-matter experts (e.g. professional career coaches, ATS consultants) with credentials.	Needs Attention
Trust Signals	Strong testimonials and customer statistics are displayed. Contact details are robust, though the lack of a branded email address (uses Gmail) is a minor trust negative.	Good

Content for AI Synthesis

Signal	Finding	Status
Factual Density	Blog content is factually dense regarding ATS rules and Australian recruitment practices, but lacks citations/external links to official reports (e.g., ABS, Jobs and Skills Australia) to anchor claims.	Needs Attention
Entity Clarity	The brand name '9Jobs' is used consistently, helping AI search models easily reference the brand entity.	Good

Technical GEO

Signal	Finding	Status
Brand graph links	Social profile links in the footer (Instagram, Facebook, LinkedIn) point to 9Jobs profiles. These should be reinforced in an Organization schema using the 'sameAs' property.	Needs Attention
Crawlability	Very clean HTML, next-generation rendering, and minimal JavaScript bloat. Highly crawlable for AI bots.	Good

AEO Analysis

Answer Engine Optimization (AEO) analyzes how well your content targets voice assistants, featured snippets, and direct responses (People Also Ask boxes).

Featured Snippet Eligibility

Signal	Finding	Status
Direct Answers	FAQ sections use clear H3s with 40-60 word summaries directly below. Very high probability of qualifying for direct answers.	Good
Tables / Lists	List elements are utilized on service pages, but comparison tables (e.g. comparing services or pricing details) are missing, limiting table snippet opportunities.	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQ Schema	Successfully deployed on blog posts and service pages. However, the homepage has a large FAQ section (5 items) that lacks schema.	Needs Attention

Voice Search Readiness

Signal	Finding	Status
Conversational Tone	Content uses clear, natural language suitable for voice-query synthesis.	Good

Priority Recommendations

This matrix details the priority actions required to improve the website's SEO, GEO, and AEO metrics:

Priority	Issue / Recommendation	Dimension	Effort	Impact
Critical	Create robots.txt file in the public folder to direct crawlers.	Technical SEO	Low	High
Critical	Add Organization & LocalBusiness schema to layout.js/homepage.	SEO/GEO/AEO	Low	High
High	Extend titles and meta descriptions for About, Contact, Pricing pages.	Technical SEO	Low	Medium
High	Implement Open Graph and Twitter Card tags in layout.js.	Technical SEO	Low	Medium
Medium	Add specific, named author bio information to blog articles (E-E-A-T).	GEO	Medium	High
Medium	Add descriptive alt tags to key brand and vector graphics.	SEO	Low	Medium
Quick Win	Add sameAs links to footer social profiles in sitemap/layout.	GEO	Low	Medium
Quick Win	Migrate from Gmail account to branded email domain (e.g. contact@9jobs.co).	GEO	Low	High

What's Working Well

Our analysis also highlighted several excellent architectural and design structures already present in the codebase:

- **Dynamic Sitemap Setup:** The dynamic `sitemap.js` properly lists all main, service, blog, and city-specific pages.
- **Clear Heading Hierarchies:** All pages have a clean and structured heading hierarchy (H1 -> H2 -> H3) with zero stuffing.

- **FAQ Schema Deployed:** FAQ Schema markup on inner pages correctly implements JSON-LD for rich snippet eligibility.
- **Strong Core Metadata:** Homepage title and description meet exactly optimal sizing specifications.
- **Highly Readable & Informative Content:** Deep, factually dense blog articles on ATS and Australian recruitment provide excellent relevance scores.
